

Unique Features Of The Ultima Shock Absorber

- Induction hardened, hard chrome plated, and super-fine polished piston rod ensures smooth contact with the oil/gas seal, providing longer life of sealing components and product.
- World-class, permanent lubricated oil/gas sealing components minimize friction between the piston rod and seal, resulting in longer life of seal and product.
- Multi-lip seal design effectively seals the oil/gas, preventing dust from entering the seal or product, ensuring product quality and durability.
- Latest generation SV-3 anti-foaming shock absorber oil reduces the wearing of the internal valve components, providing longer durability. The all-weather shock absorber oil with excellent temperature-viscosity performance (-45°C to 100°C) making the products suitable for all weather conditions.
- Teflon-coated piston ring provides close contact between piston and cylinder tube which prevents side blow-off of oil and ensures a consistent and accurate damping performance.
- Self-adjusting valve system ensures product performance sensitive to road conditions, providing a smooth controlled driving experience.
- High property cold-draw seamless cylinder and reservoir tube ensures long life of product.
- Seamless end ring with strengthen welding prevents product from breakage.
- Gas-charged: charged high pressure nitrogen gas improves internal oil flow consumption, providing better road sensitiveness and smoother driving, as well as vehicle manipulation.

Manufacturing Of The Ultima Shock Absorber

- State of the art technology and equipment to conform to modern vehicle shock absorber manufacturing standards.
- Selected raw materials and components to meet technical specifications and standards requirement.
- Strict monitoring of manufacturing processes following ISO/TS16949 quality management system requirements.
- 100% on-line performance testing makes sure every unit meets function requirements.

**DESIGNED IN AUSTRALIA FOR AUSTRALIAN CONDITIONS
WITH A 3 YEAR 100,000kms WARRANTY**

FORD TECHNICAL ADVICE

T/A 1	Check the external length of the rear shock absorbers. If the extended length is 493mm use part number 400719. If extended length is 569mm use part numbers 360006, 360081, 360082 & 400425.
T/A 2	When fitting part numbers 360090, 360091, 400090, 400091 the rear springs must be replaced if the vehicle is fitted with Ford self-leveling system. When carrying out this modification, remove the self-leveling warning light fuse.
T/A 3	Rear shock absorber part numbers 360090, 360091, 400090, 400091 include HD bump stops. The lower mounting bolts should be tightened to 8nm or noise will appear.
T/A 4	Check position of bracket for sway bar link ball joint. If approx 110mm from spring seat, can use old or new link. If approx 25mm, must use new link supplied.
T/A 5	Always check the extended and compressed lengths of all F Series 4WD shock absorbers.
T/A 6	36S001R/L, 36S005A & 36S007A are short bodied shock absorbers recommended for standard, low and super-low vehicles. These are not recommended for raised vehicles.
T/A 7	360739 is a short version of 360350 & 360350S and should only be used on super low vehicles. It is advisable to have vehicle checked by a suspension specialist.
T/A 8	360076 is a short version of 360081 and should only be used on super low vehicles. It is advisable to have vehicle checked by a suspension specialist.
T/A 9	36S001R/002L have ABS brackets and will fit all models as per catalogue.
T/A 10	Two shock absorbers are fitted to each side.

YEAR	APPLICATION MAKE AND MODEL	FRONT	NOTES	REAR	NOTES
T/A 11	36S005A is fitted with a brake pipe bracket and can be used on all models as per catalogue.				
T/A 12	This part number is supplied with a new bump stop. Bump stop are also available as separate items.

HOLDEN TECHNICAL ADVICE

T/A 1	Lower Clevis bolts should be replaced and not re-used. Only tighten to manufacturers specifications after wheel alignment has been adjusted. Clevis bolts are supplied with part numbers 65001R, 65002L, 65003R, 65004L, 65006R & 65007L which are manufactured with shortened bodies and are recommended for standard, lowered, and super-low vehicles. NOT recommended for raised vehicles. Hi-Tech bump stops are supplied.
T/A 2	When lowering Commodore Utes, models with beam rear axle, it may be necessary to cut the bump stops or fit replacement poly-units to avoid the vehicle sitting on the bump stops.
T/A 3	If part numbers 360350 & 400350L are too large in diameter, it may be necessary to enlarge the hole in the lower wish-bone, or use part numbers 360350 = 43.6mm diameter, and 360350S = 33mm diameter.
T/A 4	Before fitting, check for tyre clearance problems. If clearance problem exists, use 65004L & 65003R
T/A 5	Check the length of front shock absorbers on late model Rodeo 4WD. 360195 = 379mm extended 400575 = 372mm extended 400017 = 410mm extended 400021 = 390mm extended
T/A 6	65003R/65004L raises the vehicle height by approx 10mm. Replacement springs are required to maintain original height.
T/A 7	Use sway bar link part numbers SL651 RH, SL652 LH to adapt fitment to earlier models with ball joint on sway bar. Links have ball joints both ends.
T/A 8	Vehicles with torsion bar front suspension, the length of shock absorber must be checked. 360081 = 569mm extended 355425 & 400425 = 636mm extended
T/A 9	If standard height, use original length bump stops. DO NOT replace bump stops if lowered, use short bump stops. Refer bump stop listing.

		65278R	Use Old Sway Bar Link		
Dec-03 - Jan-08	All models 4WD Station Wagon	65279L	Use New Link Supplied	360312	Gas Shock
		65278R	Use New Link Supplied		

MAZDA TECHNICAL ADVICE

T/A 1 Part numbers 360350 & 360350S. It may be necessary to deepen the mounting holes in the lower cross pin. If 360350 is too large in diameter use 360350S

T/A 2 Check position of bracket for sway bar link. If approx. 110mm from spring seat, use old or new Link. If approx 25mm, must use link supplied.

MITSUBISHI TECHNICAL ADVICE

T/A 1 Strut noise in Cordia, Magna & Verada models will occur if there is insufficient clearance between the spring and the inner guard. This is caused by incorrect alignment of the upper spring plate / bearing carrier.

T/A 2 Supply 2-16 mm inside diameter washers when fitting 360081.

T/A 3 When replacing struts that have no keyway on the piston rod (eg; MR223173, MR223174, MR297995, MR297996), use adaptor bush SAB41 supplied.

NISSAN TECHNICAL ADVICE

T/A 1	400442 - extended 374mm, compressed 287mm, upper 48x12, lower 48x14				
T/A 2	400443 - extended 625mm, compressed 382mm, upper 42x12, lower 42x16. Supplied with 2x3mm spacers to increase upper mount to 48mm wide on earlier applications.				
T/A 3	When fitting 400460 shock absorbers, it may be necessary to slightly file / grind the compression bumper support plate on the chassis for the larger diameter shock absorbers to clear.				
T/A 4	When using larger diameter shock absorbers 400040 and 400425 it may be necessary to space out with 16mm (5/8) washers for additional clearance.				
T/A 5	Part numbers 65423R & 65424L, the distance from the weld on the spring seat to the top of the lower mounting bracket is 138mm.				
T/A 6	Part Numbers 65425R & 65426L, the distance from the weld on the spring seat to the top of the mounting bracket is 160mm.				
T/A 7	Check the size of the lower mounting bush. If 16mm supply 355304, if 19mm supply 355305.				
T/A 8	Has eye lower mount.				
T/A 9	Has fork lower mount.				
T/A 10	Year models for steering dampeners is a guide only, there are 5 steering dampners used. It is most important to check extended and compressed lengths before fitting. 27H400 Eye - Eye, compressed = 339mm, extended = 570mm. 27H402 Pin - Pin, compressed = 288mm, extended = 485mm. 27H403 Eye - Eye, compressed = 343mm, extended = 585mm. 27H404 Ball Joint - Ball Joint, compressed = 340mm, extended = 550mm. 27H500 Pin - Pin, compressed = 315mm, extended = 526mm.

TOYOTA TECHNICAL ADVICE

T/A 1 Part numbers 360350 & 360350S. If the shock absorber is too large in diameter enlarge the hole in the lower suspension member. 360350 = 43.6mm diameter. 360350S = 33.0mm diameter.

T/A 2 It is advisable to check the vehicle height to determine if raised springs have been fitted. Jack the vehicle on the chassis with the suspension at full droop, measure the distance between the shock absorber mounts. Refer numerical listing for measurements.

T/A 3 27H702 - extended = 653mm, compressed = 387mm Ball Joint / Ball Joint
27H706 - extended = 662mm, compressed = 419mm Pin / Pin

T/A 4 27H703 - extended = 682mm, compressed = 432mm Ball Joint / Ball Joint
27H706 - extended = 662mm, compressed = 419mm Pin / Pin

T/A 5 Always check the condition of the rubber section of the upper strut mount, it can cause knocking.

T/A 6 400527 is for use with extra raised springs. Make sure travel requirements are correct before fitting. Specifications in numerical listing.

T/A 7 Make sure the top housing for the shock absorber is correctly located. If off-set the wrong way the shock absorber will hit.

T/A 8 Check the extended length of the shock absorber. If 425mm use 400403, if 386mm use 360741.

T/A 9 Measure rear strut piston length. 65731L & 65730R = 200mm, 65733L & 65732R = 150mm.

T/A 10 150 Series - Use crush tube spacer.
